Fundamentals of Genetics: The Genetics You Need To Know ...

We will study the inheritance of genes in humans, using pedigree analysis. Finally, we will cover how genetics can be used to study biochemistry, and how a collection of mutants with the same phenotype can be used to study a biochemical pathway. During this unit, you will be introduced to common genetic terms and learn to use them accurately.

The Central Dogma of Genetics. The Central Dogma of Genetics is that the genetic information stored in genes is first transcribed into messenger RNA (mRNA) and is then translated into protein. Transcription occurs in the nucleus of a cell and uses the sequence of a gene to create an mRNA transcript. Each gene is identified by transcription machinery and includes its regulatory sequences ...
