[DOC] Salamander Dissection Guide

Salamander Biology - Anatomy and Physiology The salamanders are one-half inch in length when they hatch and grow to about 3 inches in total length as adults. They have a muscular tail used for swimming. They do not spend much time swimming in the water column, however, and instead walk along the substrate*.

Mudpuppy dissections! - Discovering wildlife

Salamanders are a group of amphibians typically characterized by a lizard -like appearance, with slender bodies, blunt snouts, short limbs projecting at right angles to the body, and the presence of a tail in both larvae and adults. All present-day salamander families are grouped together under the order Urodela.

Salamander - Wikipedia

Dissection of a preserved *Necturus* is a great way to enhance your comparative anatomy labs. Also known as the common mudpuppy, *Necturus* are fully aquatic salamanders. Unlike other amphibians, they do not go through metamorphosis and instead keep their external gills, gill slits, and caudal fins throughout life. Preserved in formalin.
